PREFACE.

This volume is to be regarded as a supplement to the District Gazetteer for Kamrup. The book is divided into two parts. In the former such general information is contained as will bring the letterpress of the original gazetteer up to date. The second part is taken up by revised statistical tables. The Deputy Commissioner has kindly supplied the information.

Shillong,

April 1914.

CHAPTER I.

PHYSICAL ASPECTS.

Rivers and marshes.

Much of the information contained in the original Rivers. gazetteer on the subject of the rivers in Kamrup has been out of date for some time. The following paragraphs briefly describe the state of affairs which now exists.

The principal tributary of the Brahmaputra on The Kulsi. the south bank is the Kulsi, which emerges from the Khasi Hills and runs northward through the hills of the Barduar and Pantan forests to a point a few miles south of Chaygaon. It passes this place in a wide shallow bed, but before doing so throws off a number of channels which meander over the low flat country on either side of the Trunk Road and rejoin the main stream lower down. It approaches within two miles of the Brahmaputra but is then diverted by the slightly higher ground near the river and wanders for some 40 miles in a westerly direction until it reaches its mouth near Nagarbera Hill. It is one of the main outlets for the forest produce of the south of the district, but is little used for boat traffic.

Further west the Singra river follows the same example, continually bursting its banks and flooding and Jhaljhalia the country in its neighbourhood. The Jhaljhalia river which formerly drained the west of the district has now ceased to exist except as a series of small bils.

The Digaru is the main drainage channel of the The Digaru. eastern part of the south bank. It enters the district at Barnihat where the Shillong road crosses it on a large bridge, follows a winding course in a north easterly direction, past Sonapur where another substantial bridge carries the Trunk road over it, and falls into the Kalang near the confluence of the latter with the Brahmaputra.; It is navigable by country boats of fair size throughout the year as far as Barnihat, and carries the cotton and other produce of the lower Khasi Hills.

The Singra

The Chalkhowa and Pugladia.

Various efforts have been made since the earthquake to improve and train the rivers of Kamrup, both on the north and on the south banks. In 1904 some Rs. 12,000 were spent in an attempt to re-open the old course of the Chalkhowa and thus afford a regular outlet for the rivers whose waters it used before the earthquake to collect. The attempt was, however, entirely unsuccessful and the river to all intents and purposes no longer exists except in the lower portion of its course below Godasali. The name, however, still clings to portions of the old

bed used by other rivers.

The main stream of the Pagladia now flows under the railway east of Nalbari, an old channel to the westward being stopped by an embankment at Agra, intended to keep the river in one channel which its rapid flow would scour out. A complication was, however, introduced by the railway line, to protect which against floods a new permanent opening was made in the embankment. It would be rash to say anything with certainty about the North Kamrup rivers, but it is highly probable that the action of the railway authorities in giving two openings instead of enlarging that already existing has been prejudicial to the country generally. The lower courses of both branches soon become wide and shallow with no banks to keep in the flood water, and the river instead of scouring itself a course spreads itself over the fields, causing widespread damage now along one channel and now along the other. Recently the river has shown a tendency to break away westwards at Nalbari and the railway authorities in self-defence assist this tendency by encouraging a stream which crosses under the line just west of Nalbari and then spreads over the country.

A similar state of things appears further west where the Saru Manas river has now the choice of three courses through the railway embankment; the easternmost of these it appears to have permanently abandoned, but on its way to the other two it has cut into the Beki river and repeated widening of both bridges has resulted only in the destruction of several villages and in the covering of their lands under a thick layer of sand. At the same time, however, the level of the country north of the railway has been steadily raised in many places by deposits of sand and silt and much land that was formerly waterlogged is in process of becoming

culturable.

The ravages of the Beki are new, but along the Pagladia the raivats generally have learnt to accept the vagaries of the river with a philosophy which gives way only when some hope appears that their subjection to the capricious malevolence of the rivers may be light-Dharmapur mauza, for instance, breeds in its western amphibious villages a sturdy type of cultivator who accepts the worst with resignation and at any prospect of better things, induced by floods less severe than usual, takes up for cultivation large tracts of land which he continues to hold and pay for long after hope The revenue of this mauza in consequence shows recurring cycles of increase and decrease though the area actually under cultivation may vary but little. In Balijan and Pokoa raiyats cling to lands which in some cases since the earthquake of 1897 have yielded no return, and while ready to press forward with petitions on matters seemingly trivial do not trouble to complain of floods which lay the courtyards of their houses waist-deep in water and drive their cattle into machans and trees. $\,$

On the south bank little has been attempted but with River trainthe Kulsi river, and it is open to question if the efforts south Bank. made to divert the main stream into the channel which flows past Chaygaon have not done more harm than good: the bed of the river is shallow and does not scour. and the level of the water is in many places above that of the surrounding country, resulting in a decrease in cultivation which is not compensated for by a corresponding increase elsewhere.

Most of the other rivers are channels branching off Other rivers. from those already named: the following are the more important :--

(1) The Kuldia runs down from the Bhutan hills through Chapaguri and the thickly-populated Bajali mauzas and falls into the great Barpeta system of bils: it is navigable over most of its course thoughout the year for small boats and is much used by Barpeta grain dealers. (2) The Pahumara to the west is also an outlet for the extending cultivation in the north of Barpeta subdivision and also runs through the bils into the Chalkhowa. (3) The Puthimari runs from the Barnadi to the Baralia and is navigable thoughout: it carries a considerable traffic in paddy and mustard seed.

(4) The Baralia is the post-earthquake representative of the Chalkhowa, part of whose old bed it occupies: it catches the westernmost water of the Pagladiya and conveys some of it through the Moamarijan to the Brahmaputra and some to the Barpeta bils. (5) The Kalajal or Sessa or Lakhtakhia has replaced the old Hajo Suta, and, leaving Hajo waterless and its sacred Brahmakunda pool a fetid pond, falls into the Brahmaputra at the back of Hatimura hill: during the dry season only the smallest boats can get above the growing mart of Sessamukh on the Hajo road.

General char-

The rivers which emerge from the Bhutan hills spread as soon as they reach the plains into wide channels of boulders and sand; the soil is thin, light and sandy, and the river being unable to scour a course for itself breaks up whenever drift wood, brought down by rains in the hills, becomes stranded and collects boulders about it, into a number of streams which as in the case of the Barnadi re-unite in a swamp below the boulder area, or as in the case of the Pagladia diverge into a number of branches, some of them miles apart. A heavy flood from above will not scour out any old channel but tends to form new ones, giving to the existing rivers. enough strength only to cut away the feeble restraints. of their banks and to wander across the country. further complication is introduced by the railway embankment against which floods collect in unexpected places and either breach the line or are helped through it and spread sand far and wide over the country south of it. Below the railway the soil becomes firmer, but the flatness of the country and the fact that except to the westward it rises as the Brahmaputra is approached results in the rivers not having sufficient fall to carry off any excess water and in the formation of a vast shallow basin with only one natural outlet.

Bils marches.

from what has already been said: even in the easterly portion of the district to one standing at the top of the hills which flank the railway by Chutiapara, the country at the end of the cold weather is still a sheet of chequered green and silver, of vegetation which always covers a soil that never dries and of sheets of water for which there is no escape. Further west the water awaiting release forms into the series of bils which constitute a large part of the Barpeta subdivision:

these are vast sheets of water divided only by islets of tall grass and reeds with here and there a promontory of firm ground upon which a village is placed. Karila, Kapla, Gomi, Borbil are some of the names given to parts of this great mere. At the same time other bis once extensive, such as the Asuchi bis in Oparbarbhag mauza and the Borbil near Hajo, are now in consequence of drainage operations drying up, and from the Hajo bills during the cold weather little water is to be seen northwards, but in its place yearly increasing fields of mustard.

On the south bank, apart from the interesting sheets of water formed above Barduar after the earthquake by subsidence of forest land, the bils show a tendency to diminish. The largest is the Salsala or Kukurmara bil between Palasbari and Chaygaon, but this, as well as the Dhipur bil six miles from Ganhati at the foot of the lower Khasi Hills, is gradually shrinking.

CHAPTERS II AND V.

History and Industries.

There is nothing important to add to the information on these subjects contained in the corresponding chapters of the original gazetteer.

CHAPTER III.

THE PEOPLE.

Bhatan and the Bhutias-Temples.

During the cold weather large numbers of Bhutias Bhutias and generally a few Tibetans with them come down to the plains, and if possible visit the Madhab Temple at Hajo and that on Nilachal Hill. The Darranga fair has fallen off of recent years, largely on account of outbreaks of cholera which add to the hillman's innate mistrust of the plains. In January 1914 however the Maharaja of Bhutan visited Diwangiri, where he was met by the Commissioner and Deputy Commissioner and the matter of stimulating trade with the district was discussed. It is possible that future years may see a mart established at Diwangiri, which is the meeting point of several paths from the interior. On our side the bridle-path from the plains is being steadily improved, a small bungalow is

to be erected on the highest part of the ridge, and a serai constructed at Tamulpur. Hitherto the only hospitality provided for our visitors from a friendly and allied power has been the shelter of the roadside trees; the Bhutia is not a welcome guest in any house as, like his fellows in the hills north of Assam, he believes firmly in the calorific value and economy of a coating of grime. The Subhankhatta fair now hardly exists, but at Kokilabari in the Barpeta subdivision increasing numbers of Bhutias come down. The trade in ponies and cattle now no longer exists. This is regrettable as the importation of the mithan or Bos frontalis of the hills and its crossing with indigenous cows has produced excellent results.

Temples.

In the statement at pages 114 and 115 of the original gazetteer, the amount of land held revenue free by some of the temples mentioned requires revision. The names of the temples with corrected figures are as follows :-

Sakleswar				1,276	bighas.

CHAPTER IV.

AGRICULTURE AND FORESTS.

Extension of cultivation-Cattle and grazing-Game Sanctuary.

Extension of

Although the raivat generally clings tenaciously to cultivation his flood-damaged lands, there is a steady movement to areas less precarious, and the old boundary drawn by the Gohain Kamala Ali is becoming every year less marked. This is particularly noticeable in the northern mauzas of Barpeta subdivision where land is being steadily opened up by Hindu immigrants from the south. not to be expected that in this process there should not be cases where the more simple Kachari finds that lands which he has brought under cultivation have ceased to be his, but cases of this kind are watched for and their occurrence is to a large extent [obviated, if at the cost of some efficiency, by the policy of Government in employing Kacharis in the land records staff in areas inhabited mainly by Kacharis; the gradual spread of

education northwards has facilitated this object and friction is generally rare. Cultivation is also extending in the southern mauzas on the north bank, particularly in Chenga, Barkhetri, Hajo and Uttar Saru Bangsar, but in this instance it is rather a reclaiming of old lands which were thrown out of cultivation by the floods following the earthquake than the opening up of new This is the result partly of natural causes as the old lines of drainage re-assert themselves, and partly of artificial drainage channels opened by landholders and others, some of which have been successful while others have again become silted up, generally through the waters of the Brahmaputra backing up them during high floods and obstructing their mouths with sand. The energy of the local inhabitants too often spends itself on the original work and leaves the up-keep to whatever gods there be, with the result that might be

expected.

After lying almost idle for many generations, or used only by wandering herds of alien cattle owners, the extensive grassy lands between the Gohain Kamala Ali and the Bhutan Hills are now being opened up by various enterprizes. The first of these at the present time is the 30,000 acre jute estate of Messrs. Birkmyre Brothers with its headquarters at Kumari Khatta on the road between Rangia and Darranga. For cultivation on so large a scale mechanical appliances are necessary, and in January 1914 a set of steam-ploughs accomplished the 22 mile journey from Rangia station in about 3 weeks and immediately got to work. The results of the first year's working have been favourable and the success of such a project cannot but stimulate the prosperity of the country round. Further north the Rangia and Kamalpur Estates, Limited, are taking up 5,000 acres for rubber, cotton and flax, but this industry is still in the experimental stage though promising well. In the same neighbourhood a tea garden has been started by the Brahmaputra Himalayan Tea Company, an Indian concern, and other firms are on the lookout for lands suitable for the same purpose. West of the Pagladia an experiment of perhaps greater interest and importance has been initiated by Government in the shape of sugarcane growing on a large scale with modern appliances. Admittedly experimental, the design is to attract capital by showing what can be done with up-to-date

methods, and the object is to supplement the at present insufficient supplies of indigenous sugar and so benefit the consumer. For this purpose a large area at present lying idle has been set apart and it is expected that in five years the probable success of the experiment will have been shown.

It should be mentioned that, by agreement with the Tea Association, labour which has been imported by tea gardens is not available; the various industries are required either to import their own labour or to make use of local workers, generally Kacharis, who under existing conditions have to go far from their homes to seek employment. It is hoped also that the mechanical part of the work may provide a field for the industry of the Assamese, but the efforts made by Local Boards to encourage such aspirants by granting them allowances while in their apprenticeships have so far met with only very qualified success.

Cattle and grazing. As regards the cattle of the district generally there is little to be added to what is said in the first part of the Gazetteer. Village grazing reserves have been formed and rules prescribed both for them and for reserves for professsional graziers, but there has been and is not likely to be any improvement in the breed of cattle. There are few more melancholy sights than to see the herds of miscrable creatures which are driven out daily from Gauhati town to graze and make an equally melancholy return every evening. The observer is inevitably reminded of "the stiff blind horse, his every bone a-stare" passed by Childe Roland on his way to the Dark Tower and can, like him, only conclude that they must be wicked to deserve such pain.

Game Sauctuary.

The north-west corner of Kamrup in the Barpeta subdivision is occupied by the Game Sanctuary formed in 1905-06 and under the management of the Forest Department. The reserve covers an area of 90 square miles and is specially intended for the preservation of the rhinoceros. A game-keeper resides at Mathaguri on the Manas, but it need not necessarily be inferred that, because very few cases are reported, poaching does not occur. Recent orders however authorising rewards to informers should have the effect of preserving the peace for game in the Sanctuary.

CHAPTER VI. COMMUNICATIONS.

Railway and Steamer Services.

Kamrup is now intersected throughout by the lines Railway and Steamer Serof the Assam-Bengal and the Eastern Bengal State Rail-vices. way systems, which meet at Gauhati. The Brahmaputra is crossed by a steam ferry between Pandu and Amingaon and there is also a wagon ferry for goods. From Rangia a branch line runs to Tangla in the Mangaldai subdivi-The line, as has already been indicated, is liable to damage or at least danger from sudden floods and has had a good deal of influence on the cultivation and drainage adjoining it. The opening of the Gauhati extension of the Eastern Bengal State Railway has relieved the Steamer Companies of the duty of carrying mails and now only one steamer runs daily in either direction. The steamer stations, in Kamrup are Kholabandha (a mere name representing the shifting site of a few huts, submerged as the river rises), Palasbari, Amingaon and Gauhati.

CHAPTER VII.

GENERAL ADMINISTRATION.

Mauzadari system.

Since the Gazetteer was first published the mauza-Manzadari dari system has been entirely re-established and the system. district is now divided into 52 mauzas, of which 40 are in the Sadar and 12 in the Barpeta subdivision. Much has been done to increase the powers and position of mauzadars, and the post has been made hereditary where any suitable candidates are to be Kamrup is rich in families of mauzadari status and the rare vacancies which now occur cause much anxious deliberation on one side and much heartburning on the other. The relative advantages of the mauzadari and tahsildari systems have been discussed in the original gazetteer and there can be no question of the greater popularity of the former. some cases the Kamrup mauzadars show the apparently inevitable tendency to develop an office and a sedentary receipt of custom, but many are zealous in forwarding improvements in sanitation, agriculture and education in the villages within their charge, and they are generally a great and increasing help to the administration.
